

QuickStart After School Basketball Program

Grades K - 5

This fall take advantage of QuickStart Sports Tuesday after school basketball program full of skills, drills and fundamental learning, all while having fun in a team environment. QuickStart Sports will focus on developing each players shooting, dribbling, and passing skills, defense and much more. Participants will also work on various agility exercises aimed to improve speed and quickness which will provide that extra edge on the court! As with every QuickStart Sports program we incorporate our core values system throughout the program. We believe that development of every player goes beyond just the skills associated with the sport itself! Please bring water bottle, light snack, wear athletic gear and basketball or running shoes. Space is limited, so don't delay in registering for this class.

Dates: Tuesdays, September 24 - November 19 (no class Oct 22)
Cost: \$89

<small>By signing this, I have read and understood the WA State Concussion Law at http://www.cdc.gov/ConcussionInYouthSports/. Even though most concussions are mild, all concussions are potentially serious and may result in complications including prolonged brain damage and death if not recognized and managed properly. In other words, even a "ding" or a bump on the head can be serious. You can't see a concussion and most sports concussions occur without loss of consciousness. Signs and symptoms of concussion may show up right after the injury or can take hours or days to fully appear. If your child reports any symptoms of concussion, or if you notice the symptoms or signs of concussion yourself, seek medical attention right away. For current and up-to-date information on concussions you can go to: http://www.cdc.gov/ConcussionInYouthSports/ I have also read and understood the SCA Awareness Act at http://www.ssb5083 - Sudden Cardiac Arrest Awareness. Some heart conditions at risk for SCA can be detected by a thorough heart screening evaluation. Young athletes who suffer SCA are collapsed and unresponsive and may appear to have brief seizure-like activity or abnormal breathing. SCA can be effectively treated by immediate recognition, prompt CPR, and calling 911.</small>
